

Year 2 Trip to the Power Plant

This term the year 2s have been learning about Electricity. To complete our unit of work we visited BLCP Power Station. The children started their day with an educational video in the auditorium where they were able to test their knowledge and find out new interesting facts about electricity. The year 2s then got the chance to explore and discover the different parts of the power station, the different types of coal used and how electricity can be generated through movement. The children also got the exciting chance to take a bus tour around the power station and saw the process of how electricity is made. After a busy morning of investigating the children enjoyed their lunch in the canteen and it was then time to head back to school.
